```
is a necrosis factor (NF) kB activator. The method of the invention is used to identify compounds which modulate BCMA activity (and thus NF-kB activity). The specification describes a method of identifying a activity). The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are useful for preparing a pharmaceutical composition for treating cancer, apoptosis, viral infections, inflammatory response, such as rheumatoid arthritis, inflammatory bowel disease or septic shock. BCMA is useful for identifying compounds that modulate NF-kB expression and thus for drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; BR43x2; TACI receptor; extracellular domain; BCWA; B cell protein; transmembrane activator and CAWL-interactor; tumour necrosis factor; TNF; activaty; antibody production; autoimmune disease; amyloidosis; systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; rheumatoid arthritis; asthma; bronchitis; emphysema; pyelonephritis; end stage renal failure; glomerulonephritis; vasculitis; nephritis; renal neoplasm; multiple myeloma; lymphoma; light chain neuropathy; immune response; immunosuppression; graft rejection; joint pain; graft versus host disease; inflammation; swelling; anaemia; septic shock; insulin dependent diabetes mellitus; Crohn's disease; hypertension; renal artery stenosis; occlusion; cholesterol; renal emboli.
Identifying a modulator of gene expression for drug designing, by contacting a compound library with a cell expressing an anti-cell death gene and reporter gene, and determining alteration in reporter gene
                                                                                                                                              The present sequence represents a BCMA (not defined) polypeptide. BCMA

The present sequence represents a human BCMA protein, a B cell protein related to transmembrane activator and CAML-interactor (TACI) receptor.

TACI is a tumour necrosis factor (TAN) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell protein) receptor contain a cysteine rich domain, and are used for inhibiting taff activity. Eiff 4 is a TYR ligand. They may also be used for inhibiting thing taff activity. Eiff 4 is a TYR ligand. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with activated or resting B lymphocytes, effector T-cells, or with activated or resting B lymphocytes, effector T-cells, or with a cutoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity asthma, bronchitis, emphysema, end stage renal failure, associated with a stathma, bronchitis, wasculitis, nephritis, pyelonephritis, renal myloidosis, moderating immune response, immunosuppression, graft versus host disease, inflammation, insulin dependent rejection, graft versus host disease, inflammation, insulin dependent collabetes mellitus, Crohn's disease, inflammation, insulin anemala, or septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, genists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol or renal emboli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprises administering a BR43x2, TACI or BCMA extracellular domain polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; A Proliferation Inducing Ligand Receptor; APRIL-R; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                          The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human
                                               Inhibiting or neutralizing TALL-1 or APRIL polypeptide biological activity, for treating autoimmune disorders and cancer, comprises exposing the cells to TALL-1 or APRIL polypeptide agonists or antagonists -
                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

associated with undesired call proliferation such as cancer or carcinoma. The method involves administering a composition comprising A Proliferation Inducing Ligand Receptor (APRILTR) also referred as B cell maturation protein (BCM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL It is also useful for treating autoimmune diseases (Grave's cliseases, systemic lupus srythematosus-SLB); hypertension, cardiovascular diseases, renal disorders, B-cell lympho-proliferative disorders, communosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HIV), and for treating, suppressing or altering an immune response involving a signalling pathway between APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy.

The present sequence is human APRIL-R also referred as BCMA or

treatment of a variety of immune-related disorders. BAFF R is a member of treatment of a variety of immune-related disorders. BAFF R is a member of the TWE (tumour necrosis factor) family, acting as an immunorgulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders, PB-cell lymphoproliferative disorders, Mpertension and renal disorders, PB-cell lymphoproliferative cell-induced B-cell growth and menal disorders and HIV in the treatment of immunosuppressive disorders and HIV in the BAFF-R proteins or BAFF-R proteins or BAFF-R protein an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibits B-cell growth and maturation it is useful for treating diseases cuch as systemic lupus erythematosus, autoimmune haemolytic anaemia, replidly progressive disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive growth and maturations. Since BAFF-R progressive glomerulonephilitis, and lymphomas. Nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            thrombocytopenia purpura; acute rheumatic fever; Goodpasture's syndrome; hamenlytic anaemia; Grawe's disease; myasthenia gravis; chromosome 16; post-streptococcal glomerulonephritis; polyarteritis nodosa; BCMA; B cell maturation factor; pemphigus vulgaris; B-lymphocyte proliferation.
                                                                                                                                                                                                                                                                                                                         The invention relates to the use of a BAFF receptor (BAFF-R, also known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; Tumour Necrosis Factor; TNF; immunosuppressant; TALL-1; Tumour necrosis factor and Apol-related Leucocyte expressed Ligand 1; therapy; autoimmune disorder; rhematoid arthritis; multiple sclerosis; systemic lupus erythematosus; SLE; insulin dependent diabetes mellitus:
                                                                                                                                            Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell Jympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The present sequence represents human BAFF-R.

                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to Tumour necrosis factor (TNF) and ApoL-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, coodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its corresponding nucleic acid sequence are also useful in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; A Proliferation Inducing Ligand Receptor; APRIL-R; cytostatic; gene therapy; cancer; nephrotropic; renal disorder; autoimmune disease; carcinoma; lung; colon; breast; prostate; Grave's disease; hypertension; systemic lupus erythematosus; SLE; inflammation; cardiovascular disease; B-cell lympho-proliferative disorder; BCM; Immunosuppressive disease;
                                                                                                                                                                                                                                                                                                  Isolated TALL-1 protein is used to identify compounds that regulate B lymphocyte proliferation, used to treat B lymphocyte associated autoimmune disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a human B cell maturation factor (BCMA) protein. It is the receptor for TALL-1 protein. BCMA gene is located on chromosome 16. In human tissues, BCMA is expressed by spleen and lymph nodes but not by brain, muscle, heart, lung, kidney, pancreas, testis and placenta. BCMA mRNA is absent in the pro-B lymphocyte stage but its expression increases with B lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular diseases, renal disorders, B-cell lympho-proliferative disorders, immunosuppressive diseases, organ transplantation, inflammation and
orgån transplantation; HIV; human immunodeficiency virus; TNF; murine; tumour necrosis factor; B cell maturation protein; BCMA; fusion protein; immunoglobulin G; IgG; Fc region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A Proliferation Inducing Ligand Receptor (APRIL-R) also referred as B cell maturation protein (BCN or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            also referred as BCMA or BCM protein, Fc region of human immunoglobulin G (IgG) and a signal sequence from murine Ig kappa cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of treating a mammal for a condition associated with undesired cell proliferation such as cancer or carcinoma. The method involves administering a composition comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human immunodeficiency virus (HIV), and for treating, suppressing or altering an immune response involving a signalling pathway between APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy. The present sequence is a fusion construct containing human APRIL-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating a mammal for a condition associated with undesired cell proliferation such as cancer or carcinoma, comprises administering composition comparising A Proliferation Inducing Ligand Receptor ARPET. The invention relates to the use of a BAFF receptor (BAFF-R, also known as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders BAFF-R is a member of the TNR (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R. specific antibodies can be used for inhibiting B-cell growth, dendrition, and in the treatment of autoimmune disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. B-cell lymphoproliferative disorders, and in patients undergoing organ transplantation. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating.

Cupic and in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. Since BAFF-R specific antibodies may be used for treating diseases such as systemic lupus erythematosus, autoimmune hammation. Since BAFF-R inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune hammaia, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders, B-cell lymphoproliferative disorders, hypertension and renal disorders. B-cell lymphoproliferative be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, between BAFF-R specific antibodies may be used for treating pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematchous, autoimmune haemolytic anaemia, Grave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephitis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The
                                                                                                                                                                                                                                                                                 present sequence represents a human BAFF-R protein sequence as encoded by plasmid PJST535. However, this BAFF-R protein sequence is 27 amino acids shorter than that given in AAB60698.
                                                                                                                                                                                                                                                                                                                                                                  157 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO200050633-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the use of a BAFF receptor (BAFF-R, also known as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the WNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-specific antibodies can be used for inhibiting B-cell growth, dendritic

lymphoma; gene therapy; cancer; tumour; plasmid pJST535.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell
human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The present sequence represents the BAFF-R fusion protein BAFF-R-FC, comprising a mouse IgG-kappa signal sequence, residues 1-153 of human BAFF-R and a human IgG Fc sequence.
                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptor (BAFF-R) sequence encoded by A plasmid pJST535.

            activity). The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are useful for preparing a pharmaceutical composition for treating cancer, apoptosis, viral infections, inflammatory response, such as rheumatoid arthritis, inflammatory bowel disease or septic shock. BCMA is useful for identifying compounds that modulate NF-kB expression and thus for drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Murine, Tumour Necrosis Factor; TNF; immunosuppressant; TALL-1; Tumour necrosis factor and ApoL-related Leucocyte expressed Ligand 1; therapy; autoimmune disorder; rheumatoid arthritis; multiple sclerosis; systemic lupus erythematosus; SLE; insulin dependent diabetes mellitus; thrombocytopenta purpura; acute rheumatic fever; Goodpasture's syndrome; haemolytic anaemia; Grave's disease; myasthenia gravis; BCAA; B cell maturation factor; pemphigus vulgaris; B-lymphocyte proliferation; post-streptococcal glomerulonephritis; polyarteritis nodosa.
to identify compounds which modulate BCMA activity (and thus NF-kB

invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid trathitis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, autoimmune hemenlytic anaemia, autoimmune thrombocytcopenia purpura, goodpasture's syndrome, pemphigus vulgaris, acute iheumatic fever, post-streptococcal glomerulonephiritis, or polyarteritis nodosa.

The TALL-1 protein and its corresponding nucleic adid sequence are also useful in diagnostic assays.

The present sequence is a murine B cell maturation factor (BCMA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ï

         The present sequence represents murine ztnf4, a tumour necrosis factor ligand. The extracellular domains of BR4x2 (an isoform of the transmembrane activator and CAM-interactor (FTCI) receptor). TACI or ECCE CKMA (a related B cell protein) contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. They may also be used for and are inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with an autoimmune disease selected from systemic lupus erythematosus, myasthenia cutoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The zinf4 activity and BR4x2, TACI or BCMA receptor-ligand engagement is associated with asthma. bronchitis, emphysema, end stage renal failure, capture, asthma, bronchitis, emphysema, end stage renal failure, capture, and untiple myelomas, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft crejection, graft versus host disease, inflammation, insulin dependent crejection, graft versus host disease, inflammation, insulin dependent septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery construction, or occlusion, and cholesterol or renal emboli.
                                                                                                                                                                                                                                                                                                                                                             ï

extracellular, domain of novel human transmembrane activator and catterior catterior. CaML-interactor (TACI) protein (see AAW15783). TACI is a lymphocyte receptor protein that is involved in the calcium activation pathway. It is normally present in B-lymphocytes, and to a much lesser extent in immature T-lymphocytes, and can therefore be targetted to specifically regulate B cell responses without affecting T cell activity. The extracellular domain of TACI functions as a binding site for a ligand that stimulates the activation of the cell by inducing the binding of the C-terminal portion (see AAW15784) of TACI to the N-terminal domain of CAML. A recombinant form of the extracellular portion of TACI acts as a dominant-negative or extracellular portion of TACI acts as a dominant-negative or used to treat or prevent autoimmune disease, graft rejection or used to treat or prevent autoimmune disease, graft rejection or graft versus host disease. The extracellular region is also used in a claimed method for identifying a ligand for TACI, in which binding of a candidate molecule is determined by detecting cellular activation of the AP-1, CAMP or NF-KB pathway, of NF-AT transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Marsters SA, Pitti RM;

                 antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL and Expression or activity. TALL-1 and APRIL and TALL-1 with TACI or BLOCK the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psociasis and lupus erythematosus. The present sequence is human
The invention relates to methods of using one or more agonists or

activator and CAML-interactor (TAGI) protein, a lymphocyte receptor protein that is involved in the calcium activation pathway. TAGI is normally present in B-lymphocytes, and to a much lesser extent in immature T-lymphocytes, and can therefore be targetted to Specifically regulate B cell responses without affecting T cell activity. TAGI CDNA (seev57328) was isolated from a B-lymphocyte cDNA library using a yeast two-hybrid assay. Also claimed are cDNA library using a yeast two-hybrid assay. Also claimed are attribodies to TAGI protein. Methods are claimed for identifying a mitubodies to TAGI protein. Methods are claimed for identifying a mature T lymphocytes. TAGI can be activated to increase immune control to provide immunosuppressive for treating activity, e.g. for treating infections or carders. It can be blocked to provide immunosuppression, e.g. for treating autoimmune and inflammatory conditions such as immune complexinduced vasculitis, space induced vasculitis, space increase immore complexind activity and hyperacute xenograft rejection, rheumatoid arthritis, experimental allergic and hyperacute xenograft rejection, rheumatoid arthritis, experiment or systemic lupus erythemmetosus, transplant rejection, cannot or control or con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

NyAlternate names: paired basic amino acid cleaving enzyme; proprotein convertase; serin
C;Species: Spoodoptera frugiperda (fall armyworm)
C;Date: 11-Jan-2000 #sequence_revision 11-Jan-2000 #text_change 11-Jan-2000
C;Accession: T43251
R;Cieplik, M; Klenk, H.
submitted to the EMBL Data Library, January 1996
A;Description: Cloning and functional characterization of FURIN from Spodoptera frugiper
A;Recession: T43251
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Recelectic enumber: 223368
A;Accession: T43251
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Residues: 1-1299 <CIE>

Mucin, submaxillary - pig

N.Alternate names: apomucin
C.Species: Sus acrorfa domestic pig)
C.Species: Sus acrorfa domestic pig)
C.Species: Sus acrorfa domestic no. 24-Mar-1999 #text_change 02-Jun-2000
C.Saccession: T03099; A40009; A28528; B29789
R.Schardt, A.E.; Timpte, C.S.; DeLuca, A.W.; Hill, R.L.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A. Status: not compared with conceptual translation
A. Molecule type: mRNA
A. Residues: 124-127, '1',129-229 < VIA>
C. Comment: This protein is a located in the cytoplasm.
C. Superfamily: protein-tyrosine-phosphatase, nonreceptor type 12; protein-tyrosine-phosphatase catalytic domain #status predicted < PCD>
F. S29/Domain: protein-tyrosine-phosphatase homology < PPP>
F. S23. Active site: Cys (phosphocysteine inferemediate) #status predicted
F. 231. Active site: substrate phosphate (Arg) #status predicted
                                                                                                                 C;Species: Mus musculus (house mouse)

                                                                                                                                                                                                                                                                                                                                                                                            -1- ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; PC5B/LONG (SHOWN HERE)
AND PC5A/SHORT; ARE PRODUCED BY ALTERNATIVE SPLICING.
-1- TISSUE SPECIFICITY: PC5A IS EXPRESSED IN MOST TISSUES BUT IS MOST
ABUNDANT IN THE INTESTINE AND ADRENALS. PC5B IS EXPRESSED IN THE
INTESTINE, ADRENALS AND LUNG BUT NOT IN THE BRAIN.
-1- DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBKYO.
EXCEPT IN THE DEVELOPING NERVOUS SYSTEM, THE RIBS AND THE LIVER,
BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT. AT
E5.5, INTENSE EXPRESSION IN EXTRABBRYONIC ENDODERM, AND
NASCENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK
SAC FOLLOWED BY A CONFINATION TO DERMANOTOME COMPARTMENT. BETWEEN
E9.5 AND E11.5, ABUNDANT EXPRESSION IN THE LINBS IS CONFINED
TO THE CONDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS
STAGE, STRONG EXPRESSION ALSO DETECTED IN VERTEBRAL AND FACIAL.
CRELLS OF LIMB BUDS), AT E12.5, EXPRESSION IN THE LINBS IS CONFINED
TO THE CONDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS
STAGE, STRONG EXPRESSION ALSO DETECTED IN VERTEBRAL AND FACIAL.
CARTILAGE PRINORDIA AND IN THE MUSCLE OF THE TONGUE. AT E16.5,
ABUNDANT EXPRESSION IN EPITHELIAL CELLS OF THE INTESTINAL VILLI.
CARTILAGE PRINORDIA AND IN THE MUSCLE OF THE INTESTINAL VILLI.
ISOFORM A IS MOST ABUNDANT AT ALL STAGES BUT SIGNIFICANT LEVELS OF
ISOFORM B OCCUR AT E12.5
ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN ENDOTHELIAL CELLS
AND THEIR PROCENITORS, THE ANGIOBLASTS. HAS BEEN DIRECTLY FOUND
IN PLACENTA AND LUNG, WITH A LOWER LEVEL IN UMBILICAL VEIN
ENDOTHELIAL CELLS, BRAIN AND KIDNEY.
BALFORMATIONS (WOMI), AN ERROR OF VASCULAR WORPHOGENESIS
CHARACTERIZED BY DILATED, SERPIGINOUS CHANNELS.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC
DOMAIN.
VARIANTS VMCMI TRP-849 AND SER-897.

-! FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS THAT BINDS CALCIUM. FIBRILLIN-1-CONNECTIVE TISSUE MICROFIBRILS PROVIDE LONG-TERM FORCE BEARING STRUCTURAL SUPPORT.
-! PTM: FORMS INTERMOLECULAR DISULFIDE BONDS EITHER WITH OTHER FIBRILLIN INDLECULES OR WITH OTHER COMPONENTS OF THE MICROFIBRILS (BY SIMILARITY).
-! SIMILARITY: CONTAINS 43 CALCIUM-BINDING AND 4 NON-CALCIUM BINDING

FOR THE MATUGATION OF GASINGIANS PETILIBES, MAY THE ACTIVATION OF GASINGIANS PROTICES, MAY THE ACTIVATION OF GASINGIANS AND ALGORITH ACTIVATION OF GASINGIANS AND ACTIVATION OF GASINGIANS AND ACTIVATION OF GASON OF AND ACTIVATION OF GASON OF ALGORITH ACTIVATION OF GASON OF ACCORDINGIAN OF ACTIVATION OF GASON OF ACCORDINGIAN OF ACTIVATION OF A SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRAND PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH EARLY ENDOSOMES (BY SIMILARITY).

1-1-ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; PC5B/LONG (SHOWN HERE) AND PC5A/SHORT; ARE PRODUCED BY ALTERNATIVE SPLICING.

1-1-TISSUE SPECIFICITY: EXPRESSED IN THE INTESTINE, BRAIN, ADRENAL GLAND, ANTERLOR PITUITARY, THYROID, OVARIES, TESTIS AND LUNG. HIGHEST LEVELS ARE FOUND IN THE GUT, DUODENUM, JEJUNUM AND ILEUM. EXPRESSION IS HIGHER IN FEMALE THAN IN MALE REPRODUCTIVE ORGANS.

1-1-DEVELOPMENTAL STAGE: FIRST DEFECTED AT E9 IN HIGHLY RESTRICTED EXPRESSION IS HIGHER IN THE OPTIC AND OTIC VESICLES, THE ROOF OF MIDBRAIN, AND TRUNK MYOTOMES. BY MIDGESTATION (E13-E16), EXPRESSION IN THE DEPTIC AND OTIC VESICLES, THE ROOF OF MILIPIPE REGIONS IN THE DEPTICAMUS, THALAMUS, HYPOTHALAMUS, STENCE IN IN EXPERIENCE OF MILIPIPE REGIONS INCLUDING HIPPOCAMPUS, THALAMUS, HYPOTHALAMUS, STENCE DE IN THE DEPTICAMUS, PREMER STENCE IN THE DEPTICAMUS, THALAMUS, HAPPONDAIA AND THE NEW PRIMERAL ORGAN SYSTEMS, INCLUDING GUT, LUNG, ADRENAL AND EXPRINCE ORGANS. INCLUDING GUT, LUNG, ADRENAL AND EXPRINCED IN THE DEPTICAMUS, THALAMUS, ADRIBATION AND THANDAIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. TENDETION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ TO TISTUCIAL 27:1-14(1995).

1. FUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ TESTHOUGHT TO MEDIATE THE ATTACHMENT, MIGRATION, & ORGANIZATION OF CELLS INTO TISSUES DURING BERRYONIC DEVELOPMENT BY INTERACTING MITH OTHER EXTRACELLUAR MATRIX COMPONENTS.

2. I- SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOUND TO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END.

2. I- DEVELOPMENTAL STAGE: EMBRYONIC DEVELOPMENT.

3. I- DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright.
